

Alpine Linux - Bug #9237

php5-cli only works if installed *before* php5

08/13/2018 11:47 AM - Jasper Koolhaas

Status:	Closed	Start date:	08/13/2018
Priority:	Normal	Due date:	
Assignee:	Matt Smith	% Done:	0%
Category:	Package update	Estimated time:	0.00 hour
Target version:	3.8.1	Security IDs:	
Affected versions:	3.8.1		
Description			
On a fresh Alpine 3.8 (LXD container) image:			
<pre>apk add php5 php5-cli</pre>			
doesn't actually install php5-cli:			
<pre># ls -al /usr/bin/php*; apk list --installed grep php ls: /usr/bin/php*: No such file or directory php5-5.6.37-r0 x86_64 {php5} (PHP-3.0) [installed]</pre>			
When I delete both an then adding (only) php5-cli it works ok:			
<pre>#apk del php5 php-cli; apk add php5-cli # ls -al /usr/bin/php*; apk list --installed grep php -rwxr-xr-x 1 root root 8794808 Jul 24 13:54 /usr/bin/php5 -rwxr-xr-x 1 root root 4506 Jul 24 13:54 /usr/bin/phpize5 php5-cli-5.6.37-r0 x86_64 {php5} (PHP-3.0) [installed] php5-common-5.6.37-r0 x86_64 {php5} (PHP-3.0) [installed]</pre>			
This problem doesn't seem to happen in the current edge version.
