| Target version: | 3.8.2 | Security IDs: | |
| Affected versions: | 3.8.0, 3.8.1 | | |
| Description | | | |
| After (trying) upgrading multiple hosts from Alpine 3.7 to 3.8 keepalived stucks in a segfault loop. The bug seems to be already known upstream and fixed in keepalived 2.0.5: | | | |
| <pre>* Stop segfaulting when receive a packet (fixing commit 97aec76). Commit 97aec76 - "Update config-test option so keepalived exits with status 1 on failure" had a test for __test_bit(CONFIG_TEST_BIT) the wrong way round. This commit fixes that.</pre> | | | |
| Can we get keepalived 2.0.5 from edge into Alpine 3.8 so keepalived is usable again? | | | |
| TIA, Thomas | | | |
